SINGLE EARLY TULIPS

All Single Early Tulips bloom two weeks ahead of the Darwins. Their early blooming date makes them extra showy in the garden. They also have a longer blooming period than later-flowering Tulips, due to the fact that the weather is cooler earlier in the season. Since they grow only about 15 inches high, they can stand the weather better than taller varieties. They can be used in the border to give a very colorful effect if they are planted in groups of six or more of the same color. For these reasons the Single Early Tulips are constantly increasing in popularity with the gardening public.

PRE-COOLED BULBS for Early Flowering Indoors

Order early. Only advance orders can be filled because of the fact that the bulbs have to be placed in cold storage early. The advantage of pre-cooled bulbs is that they enable the grower to force the bulbs into bloom at a much earlier date.

The Mendel Tulips can be brought into the greenhouse about December 15. They should be placed under the bench until they are 6 inches high, at which time they can be transferred to the top of the bench for flowering. The Darwin Tulips can be brought in January 1, using the same treatment as for Mendel Tulips. Pre-cooled Tulips and Daffodils will be ready for delivery October 1.

FRAGRANT HYACINTHS - Beautiful Garden Lilies

HARDY GARDEN LILIES

LILIUM auratum (The Gold-Banded Lily). In congenial surroundings it blooms abundantly on 4 to 5-foot stems in August and early September. Set the bulbs 9 to 10 inches deep. Very fragrant. Jumbo bulbs, 50c each, \$5.50 per doz.

LILIUM candidum (Madonna Lily). Differing from other Lilies, it is best planted in September. Since it is a base-rooting Lily, it need not be planted as deep as the stem-rooting kinds. The bulbs should be covered with 2 to 3 inches of soil. When planting, place a few handfuls of sand underneath each bulb. The bulbs will make 6 or 8 inches of top growth in the fall. After the ground is frozen, cover the tops with salt hay. Jumbo bulbs, 75c each, \$8.00 per doz. Regular size, 40c each, \$4.50 per doz.

LILIUM regale (Regal Lily). White with the outside of the blooms shaded purple. Plant in October and November. Blooms in July. Grows 4 feet high. Plant bulbs 6 inches deep. Jumbo bulbs, 35c each, \$3.85 per doz.

LILIUM speciosum magnificum. Pink blooms spotted with crimson, resembling an orchid. Grows 5 feet tall; blooms in August and September. Since Speciosum is a stem-rooting Lily, it should be planted 8 to 9 inches deep, with a few handfuls of sand underneath each bulb. For striking effects plant in groups of three to five with masses of white phlox. 65c each, \$6.95 per doz.

LILIUM tigrinum (Tiger Lily). Known and grown everywhere. Blooms in August and September. Grows 4 feet or more. Orange-red with black spots. A stem-rooter, needing at least 6 inches of covering. 40c each, \$4.50 per doz.

SPECIAL NOTE on *L. auratum* and *L. speciosum*: Since *Lilium auratum* and *L. speciosum* do not arrive until late November or early December, we suggest that you dig the holes for these Lilies in advance, before the soil freezes. Fill the holes with salt hay. When the Lilies are delivered, you will not be confronted with the planting problem should the ground be frozen.

Hyacinth bulbs should be spaced 10 inches apart and planted 5 to 6 inches deep. Ideal for the formal garden, they also can be planted informally in groups in the perennial border or in the foreground of the shrub border. They will scent the spring garden as no other early-flowering plant can do.

PROTECT YOUR NEW BULB PLANTINGS WITH "Bulb Protect"

"**BULB PROTECT**" is a new formulated dust material for protecting such dry bulbs as Tulips, Hyacinths, Crocus and Lilies from damage by squirrels, chipmunks, field mice, etc. It is not necessary to treat Daffodils or Narcissus, since these are not affected by insects or rodents. The bulbs are treated with "Bulb Protect" at the time of planting. Lb. (treats about 100 bulbs) \$1.50, 5 lbs. (treats about 500 bulbs) \$7.25.

AMARYLLIS

Plant one bulb in a 6-inch pot, allowing about one-fourth of the bulb to protrude above the soil level. Keep in a moderately cool dark place for about four weeks; then bring to a sunny window. CHINCH BUGS under glass, magnified seven times. Chinch bugs attack grass by piercing their tiny beaks into the grass stems to suck out juices. The grass wilts, then turns brown. They are especially active in hot, dry weather from early June until frost. Use Scotts Pest Control to kill these insects.
